REST Countries API with color theme switcher

Brief

Your challenge is to integrate with the REST Countries API (https://restcountries.eu/) to pull country data and display it like in the designs (attached in zip file).

You need to use Vue framework. You have complete control over which packages you use to do things like make HTTP requests or style your project.

Your users should be able to:

- See all countries from the API on the homepage
- Search for a country using an `input` field
- Filter countries by region
- Click on a country to see more detailed information on a separate page
- Click through to the border countries on the detail page
- Toggle the color scheme between light and dark mode

Attached is the starter code and go through the `README.md` file. This will provide further details about the project. The `style-guide.md` file is where you'll find colors, fonts, etc.
